

Inventory Management & Stock Control

Course Overview

More and more organizations worldwide want to develop products for global markets.

At the same time, they need to source material globally to be competitive. As the economy change , as competition becomes more global , it is no longer company vs. company but Supply Chain vs. Supply Chain.

Inventory Control Management is necessary in the business community

Since the year 2000, inventory control management should not be left to chances or to trial and error. To survive and thrive in these economic times, improve your inventory turnover ratio and turn frozen assets into cash.

Cutting-edge inventory control techniques have become a critical priority for all companies, and with good reason. Concepts such as flexible manufacturing, quick response, JIT, ERP, MRPII and DRP are delivering results that go far beyond initial expectations--in terms of increased productivity...less risk of obsolescence...and better cash management.

This comprehensive course enables you to go beyond theory and actually apply these techniques in a “learn-by-doing” environment. You’ll explore the latest methods for saving money, satisfying customers and speeding up the flow of inventory. You’ll learn how to take days—not hours—out of the manufacturing

and distribution cycle. And you’ll discover how to apply today’s most exciting “stockless production” techniques to case study projects.

Course Outline

- The basis of inventory control
- The role of Inventory Management
- Objectives for inventory control
- Profit through inventory management
